EXPERIENCE

Tata Consultancy Services (TCS)

Jan. 2025 – Present

Site Reliability Engineer

Mexico

- Troubleshoot deployment and infrastructure issues across enterprise AWS environments (DEV, QA, STAGE, and PROD), working across Linux, EC2, Terraform Cloud, IAM, S3, and Systems Manager to restore reliable service.
- Work with Harness CI/CD pipelines to deploy and promote changes across environments, diagnose failed executions, and resolve release blockers.
- Automate ESP and Stonebranch agent installation and configuration on Linux EC2 with Terraform Cloud, parameterized SSM Command documents, and Ansible, standardizing environment-specific deployments.
- Develop an internal Stonebranch troubleshooting assistant on Amazon Bedrock, grounded in official vendor documentation and internal runbooks to keep LLM responses tied to validated operational sources and reduce unsupported or hallucinated answers.
- Investigate infrastructure and application behavior with New Relic, Amazon CloudWatch, and Fluent Bit, and implement secure payload delivery through IAM roles and restricted S3 access.

MIGSO

Aug. 2024 – Oct. 2024

Project Engineer

Queretaro, Mexico

- Designed and delivered an employee self-service portal with Microsoft Power Apps and SharePoint; the solution was selected for internal company implementation.

Filtracion del Bajio S.A. de C.V.

May 2015 – Jul. 2023

Maintenance Assistant

Guanajuato, Mexico

- Installed and serviced industrial equipment, building hands-on experience in troubleshooting, fault isolation, and root-cause analysis within operational environments.
- Developed Python and Excel automation to extract invoice data and support warehouse entry, exit, and inventory movement tracking, reducing repetitive manual processing.

PROJECTS

Portfolio Cloud Lab | AWS, Terraform, Docker, GitHub Actions, OIDC, SSM, Route 53, NGINX

jumito.dev

- Provisioned a production-style AWS environment with Terraform, including VPC networking, security groups, EC2, IAM/SSM access, Elastic IP, and Route 53; published jumito.dev through NGINX with HTTPS/TLS.
- Implemented GitHub Actions deployments using OIDC federation to assume a least-privilege AWS IAM role and execute releases through Systems Manager, eliminating long-lived cloud credentials and inbound SSH access.
- Containerized the portfolio with Docker and NGINX, running the application behind a host-level NGINX reverse proxy with HTTPS/TLS and health checks before production cutover.

FILPRO Inventory Platform | Python, FastAPI, PostgreSQL, Docker, AWS EC2/S3/RDS/SES/SSM

- Built a Python/FastAPI inventory platform that processes PDF/XML invoices and warehouse documents, applies inventory business rules, generates auditable movements, manages vouchers and catalogs, and exposes dashboards and health checks.
- Designed the AWS staging environment with EC2, RDS PostgreSQL, S3, SES, Systems Manager, IAM, and Linux, and automated email ingestion with sender validation, attachment extraction, PDF/XML matching, classification, and duplicate detection.

EDUCATION

Instituto Tecnológico y de Estudios Superiores de Monterrey

Dec. 2024

Bachelor of Science in Mechatronics

Queretaro, Mexico

CERTIFICATIONS

HackerRank: Python (2025), C# (2025)

ITESM: Data Analytics and Artificial Intelligence Tools (2023); Professional Path of e-Series Universal Robots (2022)

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EC2, S3, IAM, Systems Manager, SES, RDS, Route 53, Bedrock), Terraform / Terraform Cloud, Linux, NGINX

CI/CD & Automation: Harness, GitHub Actions, GitHub Enterprise, AWS CodeDeploy, OIDC, Ansible, Stonebranch, Git

Containers & Orchestration: Docker, Kubernetes

Programming & Data: Python, FastAPI, SQL, PostgreSQL, C#

Observability: New Relic, Amazon CloudWatch, Fluent Bit
